Sufiyan-2003 • Born: May 16, 2003

Professional Summary

AI/ML Engineer and Software Developer with experience in Machine Learning, Deep Learning, NLP, Computer Vision, and full-stack development. Skilled in model building, API development, and deployment. Mentored 150+ students through workshops and hackathons.

Education

PES Institute of Technology and Management — **Shivamogga**

B.E. in Artificial Intelligence & Machine Learning, Expected 2026 — *2022–2026*

Relevant Coursework: ML, DL, NLP, CV, Mathematics for AI, MERN Stack

Technical Skills

Programming: Python, JavaScript, Java, C, SQL, Object-Oriented Programming

Data Science: NumPy, Pandas, SciPy, Matplotlib, Seaborn

Machine Learning: Linear & Logistic Regression, Decision Trees, Random Forests, Gradient Boosting (XGBoost, LightGBM), scikit-learn

Deep Learning: Neural Networks, CNNs, Model Fine-tuning, TensorFlow, PyTorch

NLP & LLMs: DistilBERT, Tokenization, Text Classification, Large Language Models (LLMs)

Computer Vision: OpenCV, Image Processing, Feature Extraction

Web & APIs: Flask, REST APIs, Model Serving, Backend Integration

Databases: MongoDB, MySQL, Firebase

Cloud & DevOps: Docker, Cloud-Based Platforms, Deployment Pipelines

Tools: Git, GitHub

Professional Experience

Webschedio Pvt. Ltd. — **Shivamogga**

Full-Stack Developer Intern — *Mar–Jul 2024*

- Built responsive UI components using React, HTML, CSS, JavaScript
- Integrated REST APIs and improved UI/UX consistency
- Developed reusable components boosting dev efficiency by 30%

ERA Foundation (ComedKares Innovation Hub) — **Bangalore**

Data Science & AIML Intern — *Feb–May 2026*

- Performed data preprocessing, EDA, and visualization using Python, NumPy, and Pandas
- Implemented ML models (Logistic Regression, SVM, KNN) for predictive analysis
- Built an end-to-end data science project and managed code using GitHub

Key Projects

Early Detection of Cardiovascular Disease (Final Year Project) *2026*
Technologies: IoT (PPG and ECG Sensor, ESP32-C3), LSTM, FastAPI, Firebase, React Native, Python

- Developed an IoT-enabled wearable system to monitor ECG, heart rate, and SpO_2 in real time using ESP32 and cloud integration.
- Implemented an LSTM-based deep learning model trained on the MIT-BIH ECG dataset for accurate cardiovascular risk prediction.
- Built FastAPI backend and React Native app for real-time vitals, risk scoring, and AI health insights

AI Smart Traffic Control System (Emergency Vehicle Prioritization) *2025*
Technologies: Python, OpenCV, Machine Learning, IoT

- Developed an AI-based traffic system to detect ambulances and prioritize signal clearance in real time
- Implemented computer vision techniques for vehicle detection and classification using OpenCV
- Designed a smart decision system to optimize traffic flow and reduce emergency response time

Digital Child Growth Passport *2025*
Technologies: Python, Data Analytics, Web Technologies

- Developed a digital platform to track and manage child health records including growth and vaccinations
- Implemented data analysis to monitor growth patterns and provide health insights
- Designed a user-friendly system for parents and healthcare providers for efficient record management

AI Smart Hiring System (Virtual Hiring Platform) *2025*
Technologies: Python, Machine Learning, Flask, SQL, Docker

- Designed an AI-driven system for automated candidate screening
- Applied ML techniques for resume analysis and candidate scoring
- Built Flask-based REST APIs for recruiter interaction

Real-Time AQI Monitoring System *2025*
Technologies: Flask, WAQI API, JavaScript

- GPS-enabled AQI tracker with live updates
- Visualized AQI trends using interactive charts
- Built auto-refresh environmental monitoring

Image Steganography Web App *2025*
Technologies: Flask, Cryptography

- AES-encrypted LSB steganography
- PSNR-based quality check
- Simple UI for secure message handling

Teaching, Achievements & Mentorship

- Conducted full-stack workshop for 60+ students and mentored 150+ learners
- Guided hackathon teams and delivered 10+ AI/ML and web projects
- Active open-source contributor and community educator

Certifications

2021: Hardware & Networking
2024: Generative AI Workshop — NxtWave
2024: Machine Learning Specialization
